Downgrading to Sell

Double hit in 2015; downgrading to Sell

Weak earnings growth of only 6% in 2015E (from 13% CAGR in 2009-14) and a high 25x PE could trigger a de-rating of HKG and combine to justify our downgrade to Sell. The premium valuation was helped in the past by strong growth in mainland gas business but now could be eroded by poor results in its new energy division (where HKG lacks expertise), especially after the sharp drop in oil and commodity prices. The company also faces increased competitive pressure on its China gas business as other fuels are now much cheaper. This report marks the transfer of coverage from Michael Tong to

New energy business: a challenging year in 2015 on lower oil price

HKG's FY14 core earnings were 2% below our forecast, mainly on weak results from the new energy segment (-2% yoy). This segment, which includes oil E&P, coal mines and coal-to-methanol projects, could face another c.20% earnings decline in 2015, with a c.40% drop in oil price, c.30% drop in methanol price, and c.10% decline in coal price over the past year. This segment accounted for nearly 20% of HKG's total assets but only 7% of its net profit in 2014. Such exposure could grow further as the majority of HKG's capex is allocated to this segment, bringing higher risk and volatility.

Mainland gas business: economic disadvantage poses risks

We estimate the natural gas price to be at a premium of 13% over LPG and 67% over fuel oil, even after the modest gas price cut of 2.7% (blended basis) effective from 1 April 2015. The pricing disadvantage, in a weak macro outlook, is putting pressure on HKG's city gas business in China. We still assume 12% yoy volume growth and a stable gross margin of Rmb0.67/cum in 2015. But every 1% lower volume or Rmb0.01/cum margin squeeze could have 0.8% and 1.1% earnings downside, respectively, for the company.

SOTP target price of HK\$15.0; Sell

Our SOTP target price of HK\$15.0 comprises HK\$7.0 from the HK gas segment, HK\$5.3 from mainland China gas, HK\$1.0 from new energy, and the rest from property and others. Upside risks: better-than-expected results from the new energy business, value-accretive M&A, higher-than-expected gas sales volume, a further cut in gas cost, and share buybacks by the company.

Company Profile

The bulk of HKG's earnings come from a vertically integrated gas distribution business which involves the production and distribution of towngas to 1.7m customers in Hong Kong. Returns/tariffs from HKG's Hong Kong based gas business are not regulated. HKG has also been building a portfolio of stakes in city gas JVs located in mainland China and is keen to invest in the upstream gas sector, water and the environmental-friendly energy businesses. Additionally, HKG has some property investments in Hong Kong.

Investment thesis

Outlook

We now rate HKG as a Sell. We expect the core earnings growth to slow to c.6% in 2015 from a 13% CAGR during 2009-14. It is trading at a 2015E PE of c.25x, much more expensive than Chinese gas utilities peers despite its lower earnings growth profile.

We expect a c.20% yoy decline in the earnings of the new energy business in 2015, after the sharp drop in oil and other commodity prices. HKG had nearly 20% of its total assets invested in this segment as of end-2014, but it generates less than 10% of the company's total earnings. We expect increasing exposure in this business, as the company invests more, to increase HKG's risk profile and lead to a de-rating in HKG's valuation multiples.

We also expect slower earnings growth of 13% in 2015 (from 16% in 2014) for HKG's China gas business. Natural gas is now more expensive than LPG and fuel oil, after two rounds of price hikes in 2013-14 and the sharp drop in oil product prices since Sep 2014. The modest gas price cut of 2.7% (on a blended basis) effective from 1 April 2015 will not help much. The pricing disadvantage, together with a weak macro outlook, is putting pressure on the gas sales volume. In addition, weak new starts in residential property could exert pressure on household connection revenue over the next few years.

Valuation

We value HKG using a sum-of-the-parts (SOTP) approach. Our SOTP target price of HK\$15.0 comprises HK\$7.0 from the HK gas segment, HK\$5.3 from mainland China gas (HK\$1.0 of which is from its attributable stake in Towngas China), HK\$1.0 from the new energy business, and the rest from property and others. The valuation for its gas businesses in both HK and China is DCF-based, using WACC of 5.7% and 7.9%, respectively.

Risks

The key upside risks include better-than-expected progress and results from the new energy business; higher-than-expected gas sales volume or margins from its mainland gas business; significant value-accretive M&A in city gas projects; and a higher-than-expected increase in the basic tariff for the HK business.

In addition, HKG can do share buybacks, which could help support the share price. The most recent share buybacks occurred on 7-8 October 2014 at an average price of HK\$17.0/share.

Derivation of target price

We value HKG using a sum-of-the-parts approach. The bulk (c.47%) of HKG's value, or HK\$7.0 per share, is derived from the core HK business, where we assume a WACC of 5.7% (2.7% risk-free rate, 4.9% market risk premium, 0.8x beta, 4% before-tax cost of debt) and growth in our terminal value of 1.0%.

We value HKG's China gas business at HK\$5.3 per share, or 35% of the total value. Of which, HK\$1.0 is from HKG's attributable stake in Towngas China (TCCL, 1083.HK, Hold), based on our target price on TCCL of HK\$6.4/share. Aside from Towngas China, we value HKG's other gas business in China using DCF, assuming a WACC of 7.9% (3.9% risk-free rate, 5.6% market risk premium, 1.0x beta, 5.5% before-tax cost of debt) and terminal growth rate of 2.0%, similar to our assumptions for Chinese gas utilities.

The other businesses are valued using NAV discount (for property, mainly IFC) and a combination of price-to-book multiples and DCF valuation (for the new energy business and other financial investments).

Figure 1: Derivation of target price

			Comment
Enterprise Value	(HK\$m)	HK\$/share	
Hong Kong gas	76,441		DCF-based assuming WACC of 5.7% and terminal growth of 1%
Mainland utilities (ex. TCCL)	57,497		DCF-based assuming WACC of 7.9% and terminal growth of 2%
HKG's stake in TCCL	10,512		Attributable equity value for HKCG's stake in TCCL (using DB target price for TCCL of HK\$6.4/share)
lew Energy	19,588		Sum of the parts of major new energy projects, a combination of both DCF valuation and multiples
Property	11,577		Mostly IFC, Based on our property team's NAV estimates and 30% NAV discount
Others	3,683		Incl. available-for-sale and other investments at book value
Total EV	179,299		
.ess net debt (ex. TCCL)	(14,030)		Excludes net debt of TCCL, as we only include attributable equity value above
ess minority interests (ex. TCCL)	(5,168)		Excludes TCCL, based on 2.0x P/BV
ess perpetuals	(2,354)		
Equity Value	157,747	15.0	100% Based on 10,512m shares outstanding
HK	74,087	7.0	47%
China ex TCCL	44,715	4.3	28%
HKG's stake in TCCL	10,512	1.0	7%
New Energy	11,000	1.0	7%
Property	11,577	1.1	7%
Others	5,855	0.6	4%

Valuation comparison

HKG used to trade at c.30x PE in 2005-10, except for the period of financial crisis in 2008-09. This was supported by rapid growth from its city gas business in China, where both gas sales volume and attributable segment earnings recorded a c.50% CAGR during 2004-10. The mainland city gas business is still growing, but at a much slower rate (from 25% volume growth in 2010 to c.12% in 2015E). Therefore, although HKG's forward PE of c.25x does not look high compared to its historical average, we still think the shares are expensive, with core earnings CAGR declining from 13% during 2009-14 to c.6% in 2015E. Its forward P/BV of 3.2x also looks high versus a c.14% ROE.

Investors seem to have given the company the benefit of doubt on its new energy business and pay for its defensiveness. However, we expect criticism on its new energy investment to escalate, due to still disappointing segment earnings after eight years of investment, lack of expertise, and higher risk profile of the upstream projects. The expensive valuation does not leave much room to tolerate earnings misses either, in our view. Our earnings forecasts are 6-8% below consensus for 2015-16. We believe HKG could face a de-rating in

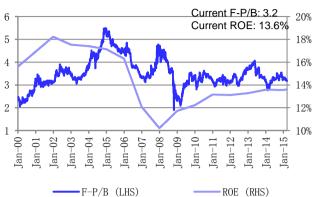

PE multiple when investors become increasingly uncomfortable with the exposure to the new energy business.

Figure 2: HKG 12m forward P/E

Figure 3: HKG forward P/B vs. ROE

Source: Deutsche Bank, Bloomberg Finance LP, Company data

Source: Deutsche Bank, Bloomberg Finance LP, Company data

HKG has outperformed Chinese gas utilities by c.30ppt since the beginning of 2014, as the Chinese gas utilities were sold off with market concern on demand weakness and affordability issue of industrial customers after gas price hikes in China. We acknowledge the impact on HKG is smaller, as c.47% of its valuation lies in its Hong Kong gas business, but still, it is difficult to justify such significant outperformance for HKG, with the premium in forward PE multiples expanding to over 50% now (Figure 6). HKG is trading at a 2015E PE of c.25x, higher than Chinese gas utilities peers of 13-22x despite lower earnings growth (7% CAGR in 2014-16E versus 13% on average for peers). HKG is also much more expensive than other HK utilities at 13-16x 2015E PE.

New energy business – pressure from low oil price

HKG started to invest in new energy business around 2006. According to management, the reason for such a strategic move is that China has a lot of coal reserves but limited oil and gas reserves, and some of the industrial/agricultural waste is not well utilized. Therefore, HKG, through its wholly owned subsidiary EGO, started to engage in developing and applying technologies to convert low-value feedstock to produce crude and natural gas substitutions. Management holds a very optimistic view that this business will deliver high growth in the future.

Figure 9 shows a summary of the projects in the new energy business in mainland China and overseas. HKG has also invested in an aviation fuel storage facility and five LPG stations in Hong Kong, which are classified as new energy business.

In FY14, of the HK\$510m in core earnings of the segment, the majority contribution came from the aviation fuel facility in Hong Kong (c.62%), the coal

bed methane (CBM) liquefaction project in Shanxi (nearly 20%), and the onshore oil E&P project in Thailand (c.30%), while the coal mines/coal to methanol projects in Inner Mongolia were loss making and the LNG stations were largely break-even as the utilization rate is yet to ramp up, according to management.

Figure 9: Summary of new energy projects in China and overseas

			Total investment	Attributable investment

Earnings contribution still lackluster; lack of transparency remains

Investors seem to have given the company the benefit of doubt in the past several years. However, we are yet to see any meaningful earnings contribution from the new energy segment. In 2014, the new energy business accounted for 18% of the company's total assets, but only c.7% of its total core earnings.

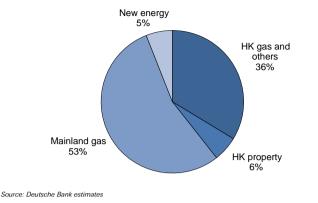

Although the company has improved its disclosure on the new energy business by providing segment information, in our view it is still not transparent enough given the vastly different nature of various projects in the segment.

Figure 10: Total asset mix by segment, end-2014

Higher risk profile; lower commodity price dampens return

The company management expects over 20% project IRR from the new energy investment in general (higher than over 15% for city gas projects in China). However, there has been a c.40% drop in oil price, c.30% drop in methanol and gasoline price, and c.10% decline in coal price over the past year (Figure 12 to Figure 15). The sharp decline in oil and other commodity prices dampens the returns for some of the projects, such as oil E&P, coal mines, and coal-to-methanol/gasoline projects. In addition, the economic disadvantage of natural gas versus alternative fuels affects demand for LNG, and in turn returns for HKG's LNG refilling stations and CBM liquefaction projects.

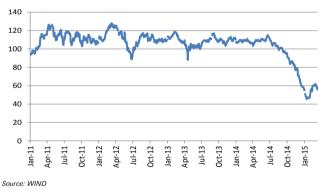

Figure 13: Qinhuangdao coal price (Rmb/t, incl. VAT)

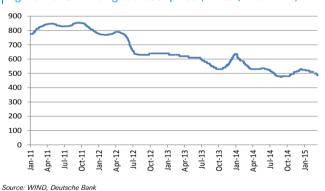

Figure 14: Methanol price (Rmb/t)

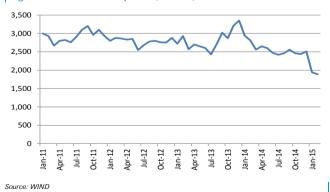

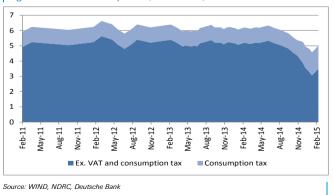

Figure 15: Gasoline price (Rmb/litre)

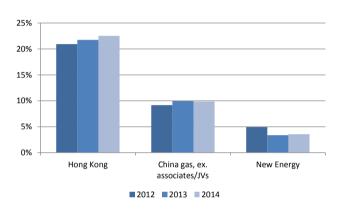

We expect the new energy segment to incur a c.20% yoy earning decline in 2015 before recovering in 2016-17 with a modest recovery in the oil price and new projects coming into operation. But even after the recovery, the earnings contribution from this segment is likely to be less than 10% of the company's total earnings in 2016-17.

We also see higher implementation risk from the new energy business compared to its city gas business in Hong Kong and mainland China. Coal chemicals and upstream oil and gas E&P involve complex processing and engineering. Although HKG has some experience in this area, it is not its core competency. As shown in Figure 9, there have been delays in the commissioning of several projects.

Mainland China gas – pricing disadvantage vs. alternatives

Natural gas not economically competitive even after 1 April cut

The NDRC has announced the adjustment to the ceiling natural gas price at provincial gate level effective from 1 April 2015. The "incremental volume" tariff will be cut by Rmb0.44/cum and the "base volume" tariff will be raised by Rmb0.04/cum to achieve the pricing converge. Based on the 25/75 incremental/base mix, we estimate that the blended gas price will be modestly reduced by 2.7% at the provincial gate.

To recap on "base volume" and "incremental volume":

- The "base volume" has been set at 112bcm, which is the actual natural gas consumption through pipeline transportation in 2012. The "incremental volume" is any additional volume above the "base volume".
- The provincial gate gas tariff for the "incremental volume" in Shanghai is benchmarked to the market price of fuel oil and LPG, in which the weighting for fuel oil and LPG (on a heat-adjusted basis) would be 60% and 40%, respectively. A 15% discount would then be applied when setting the ceiling natural gas gate tariff. The provincial gate prices for other provinces are referenced to Shanghai gate price considering the transmission distance and affordability.

Figure 18: Blended provincial-gate price change (Shanghai)

(Rmb/cubic meter)	Sep-14	Volume mix	Chg	Apr-15	Chg (%)
Base	2.84	75%	0.04	2.88	1.4%
Incremental	3.32	25%	-0.44	2.88	-13.3%
Average	2.94			2.88	-2.7%

However, even after the price cut, we estimate the price competitiveness of natural gas versus alternative fuels to remain unfavorable after the sharp oil price decline over the past 12 months – the price of converged natural gas versus LPG and diesel will likely remain at a 1-13% premium (versus a 20% discount in February 2014), while the premium to fuel oil has been widened to 67% (from 7% in February 2014).

Combined with a still-weak macro outlook, we see risks of volume growth or compromised margins of gas distributors, especially for sales to certain industrial and vehicle users. For more details, please see *China Gas Utilities – Small cut in blended gas price won't help, maintaining Hold*, published on 2 March 2015.

Figure 19: Natural gas price vs. LPG price

Figure 20: Natural gas price vs. fuel oil price

Figure 21: LNG price vs. diesel price (Shandong)

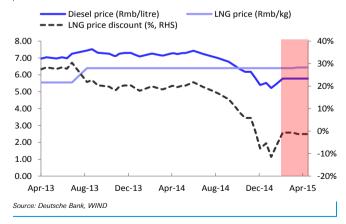

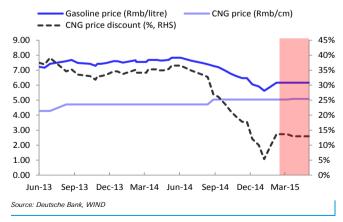

Figure 22: CNG price vs. gasoline price (Shandong)

Will the natural gas price be cut in 2H15?

There is a view in the market that after the NDRC converges the natural gas price from 1 April 2015, there will be a further cut to the unified price in 2H15. However, the NDRC did not specify in its announcement any future price

adjustments for non-direct supply users (timing, pricing formula, etc), and we believe it is still premature to assume another tariff cut in 2H15.

- We understand that the NDRC's goal is to reform natural gas pricing to be market-oriented. The Shanghai Natural Gas Trading Center will be established this year to create China's own Henry Hub price. The "net-back" pricing mechanism is actually not a market-oriented pricing mechanism. The real market price should be concluded on negotiation between buyers and sellers, considering the demand/supply dynamics of natural gas, rather than the prices of substitute fuels. In this regard, NDRC may not be keen to adjust the price again, after the three-step pricing reform is completed.
- Even though the NDRC still sets the price, the 15% discount rate used in the "net-back" pricing formula could be revised. Such a discount was used to prevent natural gas prices from rising too quickly when the oil price was over US\$100/bbl in 2013. With the oil price having fallen dramatically, the discount may be narrowed or removed.
- The NDRC may hold back from cutting provincial gate gas prices to encourage investment in domestic production, especially in unconventional gas. Moreover, PetroChina will likely object to further cuts to avoid widening losses again, as the imported prices of some pipe gas or LNG are not fully linked to the oil price.
- The NDRC may selectively cut the gas price for some users, such as power plants. However, city gas distributors will not benefit, as most power plants are directly supplied by the three upstream gas suppliers.

Connection revenue could face risk

New starts in residential property GFA declined by 14% yoy in 2014, which is likely to exert pressure on residential connection fees with a 6-12-month lag. Demand weakness in commercial/industrial users makes residential growth more critical, especially from old houses with a lower margin. We suspect the high-margin connection business, which still accounts for c.20% of HKG's earnings, could face revenue downside in the medium term.

Hong Kong Gas – potential tariff hike factored in

HKG's gas business in Hong Kong is not regulated. In theory, HKG is free to raise its basic tariff (only needs to give three months' notice to the HK government), but it needs to keep its tariffs competitive against electricity. Currently, we estimate HKG's gas tariff is c.15% cheaper than CLP's electricity tariff and c.26% cheaper than HKE's electricity tariff on a heat-adjusted basis.

We note that CLP's tariff is likely to rise in the next few years, due to the increasing usage of natural gas to meet the emission cap and rising fuel cost from more expensive natural gas from Central Asia. This will increase the pricing gap between gas and power on a heat-adjusted basis, suggesting some scope for the HK gas tariff to piggy-back without losing its competitiveness (Figure 23 and Figure 24).

About 50% of HKG's fuel cost is fixed at low levels under the long-term LNG supply contract from Australia. The decline in oil price and naptha cost also works in HKG's favor, as it can help reduce the fuel cost surcharge and leaves larger upside potential in the non-fuel portion of the tariff (i.e. basic tariff),

although HKG will likely be very careful about the pace and the amount of raising basic tariff to avoid the risk of inviting political pressure to regulate its return.

HKG has pledged to the HK government that it will not raise the basic gas tariff in Hong Kong before April 2015. Considering the three months' notice period to the HK government, we believe that HKG could raise basic tariff again later this year. We have factored in a HK\$0.01/MJ tariff hike, or 4.4%, effective from 1 October 2015. The company recently raised basic tariff by HK\$0.003/MJ in 1 October 2008, by HK\$0.006/MJ in 1 April 2010, and by HK\$0.01/MJ in 1 April 2013.

Earnings review and forecasts

FY14 results review

HKG announced its FY14 results on 18 March after market close. Reported net profit was up 4% yoy to HK\$7.1bn, mainly due to a 13% yoy increase in gas sales volume in Mainland China. Stripping out one-offs such as property revaluation gain and FX gain/loss, recurring earnings were up 10% yoy to HK\$7.0bn. This was c.2% below our estimate and c.5% below consensus, mainly on weak result from the new energy business with segment earnings down 2% yoy.

Dividend per share was HK\$0.35, up 10% yoy after adjusting for the bonus share issuance, in line with our estimate.

Key assumptions and earnings sensitivity

We expect HKG's earnings growth to slow from 13% in 2009-14 to 6% in 2015 and 7% CAGR in 2014-17, due to challenges for its new energy business on lower oil/commodity prices, and slower growth in its gas business in China as natural gas is economically uncompetitive in a weak macro environment.

Figure 25: Core ea	rnings brea	kdown by	segment

Total		11%	10%	6%	9%	5%

Figure 26 shows our key assumptions for HKG's gas business in Hong Kong and China:

For Hong Kong gas business, we assume gas volume growth of c.1% pa and basic tariff hike of HK\$0.01/MJ, or 4.4%, effective 1 October 2015, before another hike in April 2018.

For mainland China gas business:

- Gas sale volume was up 14% yoy to 15.2bcm in 2014. We assume 17bcm of gas sales volume in 2015 (up 12% yoy), in line with management guidance. Management still guides for double-digit growth in gas sales volume for next five years.
- We have allowed for the temporary margin compression from the 1 Sep 2014 gas cost hike to be restored in 2015, and the gross margin for C&I sales to remain stable at c.Rmb0.86/cum going forward versus Rmb0.25/cum for residential gas sales. For every Rmb0.01/cum lower gross margin, there would be 1.1% downside to our earnings estimates (Figure 27).
- We still assume modest connection revenue growth of 10% in 2015, with penetration rate at c.50%. But we acknowledge that a slowdown or eventual decline would be a longer-term concern.

We have allowed for stable connection gross margin of 70% in 2015-16E, before trending down to 68% in 2017E and 65% in 2018E.

For the new energy segment, we expect the earnings to drop c.20% yoy in 2015 and account for only c.6% of HKG's total core earnings, before recovering in 2016-17 with a modest recovery in oil price and with new projects commissioned and ramped up. Management expects good return from the methanol-to-gasoline project (trial run started in 4Q14), two cokeoven gas to LNG projects (to start operation late this year) and palm oil residue to diesel (to start operation in mid 2016).

We assume Brent oil price of US\$59/bbl (-40% yoy) in 2015, US\$70/bbl (+18% yoy) in 2016 and US\$75/bbl (+7% yoy) in 2017, in line with our oil research team's forecasts. This is partially offset by an increase in Thai oil production volume from less than 4,000bbl/d in 2014 to 6,000bbl/d in 2015E. We assume 15-25% ROI for projects under construction. We estimate every US\$5/bbl lower oil price could reduce HKG's earnings by c.1%.

We have not factored in any new energy projects that have not yet been announced by management. However, company management indicated at the analyst briefing that a total of c. HK\$15bn in capex is planned in the coming three years and the majority will be allocated to the new energy business. We think this could further add to earnings volatility.

Figure 28: Earnings forecasts for new energy segment (HK\$ m) 2011 2012 2013 2014 2015E 2016E 2017E Hong Kong: 259 255 285 318 305 305 305 Aviation fuel facility 233 233 258 275 275 275 275 LPG business 26 22 27 43 30 30 30 Mainland China: 243 323 180 42 20 150 233 **CBM** liquefaction 31 38 44 85 118 124 132 Coal-to-methanol project 8 94 68 30 (47)(23)(11)67 Coal mine + logistics 203 190 (73)(87)(95)(78)LNG stations 5 20 30 Coke oven gas to LNG 9 36 72 Methanol to gasoline 22 88 88 83 101 Overseas: 52 55 150 137 Thailand oil E&P 52 55 150 83 101 137 Total core earnings 502 630 510 407 556 675 520 YoY 25% -17% -2% -20% 36% 21% 7% 6% 7% 8% % of company total 10% 11% 8%

Deutsche Bank versus consensus

Our reported earnings forecasts are 12% below consensus in 2015-16, while our core earnings forecasts are 6-8% below consensus. We believe this is partly because we do not factor in any property revaluation in our core earnings forecast. We also believe the consensus may have not updated for the negative earnings impact from lower oil prices on HKG's new energy business.

Important Disclosures

Additional information available upon request

Disclosure checklist			
Company	Ticker	Recent price*	Disclosure
Hong Kong & China Gas	0003.HK	17.54 (HKD) 18 Mar 15	NA

^{*}Prices are current as of the end of the previous trading session unless otherwise indicated and are sourced from local exchanges via Reuters, Bloomberg and other vendors. Data is sourced from Deutsche Bank and subject companies.

For disclosures pertaining to recommendations or estimates made on securities other than the primary subject of this research, please see the most recently published company report or visit our global disclosure look-up page on our website at http://gm.db.com/ger/disclosure/Disclosure.egsr?ricCode=0003.HK

Analyst Certification

The views expressed in this report accurately reflect the personal views of the undersigned lead analyst(s) about the subject issuer and the securities of the issuer. In addition, the undersigned lead analyst(s) has not and will not receive any compensation for providing a specific recommendation or view in this report. Yuxiao Peng

Historical recommendations and target price: Hong Kong & China Gas (0003.HK) (as of 3/18/2015)

Equity rating key

Buy: Based on a current 12- month view of total share-holder return (TSR = percentage change in share price from current price to projected target price plus pro-jected dividend yield), we recommend that investors buy the stock.

Sell: Based on a current 12-month view of total shareholder return, we recommend that investors sell the stock

Hold: We take a neutral view on the stock 12-months out and, based on this time horizon, do not recommend either a Buy or Sell.

Notes:

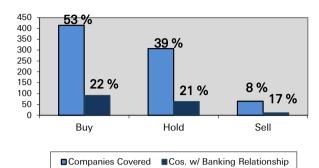

- 1. Newly issued research recommendations and target prices always supersede previously published research.
- 2. Ratings definitions prior to 27 January, 2007 were:

Buy: Expected total return (including dividends) of 10% or more over a 12-month period

Hold: Expected total return (including dividends) between -10% and 10% over a 12-month period

Sell: Expected total return (including dividends) of -10% or worse over a 12-month period

Equity rating dispersion and banking relationships

Regulatory Disclosures

1. Important Additional Conflict Disclosures

Aside from within this report, important conflict disclosures can also be found at https://gm.db.com/equities under the "Disclosures Lookup" and "Legal" tabs. Investors are strongly encouraged to review this information before investing.

2. Short-Term Trade Ideas

Deutsche Bank equity research analysts sometimes have shorter-term trade ideas (known as SOLAR ideas) that are consistent or inconsistent with Deutsche Bank's existing longer term ratings. These trade ideas can be found at the SOLAR link at http://gm.db.com.

3. Country-Specific Disclosures

Australia and New Zealand: This research, and any access to it, is intended only for "wholesale clients" within the meaning of the Australian Corporations Act and New Zealand Financial Advisors Act respectively.

Brazil: The views expressed above accurately reflect personal views of the authors about the subject company(ies) and its(their) securities, including in relation to Deutsche Bank. The compensation of the equity research analyst(s) is indirectly affected by revenues deriving from the business and financial transactions of Deutsche Bank. In cases where at least one Brazil based analyst (identified by a phone number starting with +55 country code) has taken part in the preparation of this research report, the Brazil based analyst whose name appears first assumes primary responsibility for its content from a Brazilian regulatory perspective and for its compliance with CVM Instruction # 483.

EU countries: Disclosures relating to our obligations under MiFiD can be found at http://www.globalmarkets.db.com/riskdisclosures.

Japan: Disclosures under the Financial Instruments and Exchange Law: Company name - Deutsche Securities Inc. Registration number - Registered as a financial instruments dealer by the Head of the Kanto Local Finance Bureau (Kinsho) No. 117. Member of associations: JSDA, Type II Financial Instruments Firms Association, The Financial Futures Association of Japan, Japan Investment Advisers Association. Commissions and risks involved in stock transactions - for stock transactions, we charge stock commissions and consumption tax by multiplying the transaction amount by the commission rate agreed with each customer. Stock transactions can lead to losses as a result of share price fluctuations and other factors. Transactions in foreign stocks can lead to additional losses stemming from foreign exchange fluctuations. "Moody's", "Standard & Poor's", and "Fitch" mentioned in this report are not registered credit rating agencies in Japan unless Japan or "Nippon" is specifically designated in the name of the entity. Reports on Japanese listed companies not written by analysts of Deutsche Securities Inc. (DSI) are written by Deutsche Bank Group's analysts with the coverage companies specified by DSI.

Malaysia: Deutsche Bank AG and/or its affiliate(s) may maintain positions in the securities referred to herein and may from time to time offer those securities for purchase or may have an interest to purchase such securities. Deutsche Bank may engage in transactions in a manner inconsistent with the views discussed herein.

Qatar: Deutsche Bank AG in the Qatar Financial Centre (registered no. 00032) is regulated by the Qatar Financial Centre Regulatory Authority. Deutsche Bank AG - QFC Branch may only undertake the financial services activities that fall within the scope of its existing QFCRA license. Principal place of business in the QFC: Qatar Financial Centre, Tower, West Bay, Level 5, PO Box 14928, Doha, Qatar. This information has been distributed by Deutsche Bank AG. Related financial products or services are only available to Business Customers, as defined by the Qatar Financial Centre Regulatory Authority.

Russia: This information, interpretation and opinions submitted herein are not in the context of, and do not constitute, any appraisal or evaluation activity requiring a license in the Russian Federation.

Kingdom of Saudi Arabia: Deutsche Securities Saudi Arabia LLC Company, (registered no. 07073-37) is regulated by the Capital Market Authority. Deutsche Securities Saudi Arabia may only undertake the financial services activities that fall within the scope of its existing CMA license. Global Disclaimer

The information and opinions in this report were prepared by Deutsche Bank AG or one of its affiliates (collectively "Deutsche Bank"). The information herein is believed to be reliable and has been obtained from public

Deutsche Bank may engage in securities transactions, on a proprietary basis or otherwise, in a manner inconsistent with the view taken in this research report. In addition, others within Deutsche Bank, including strategists and sales staff, may take a view that is inconsistent with that taken in this research report.

Opinions, estimates and projections in this report constitute the current judgement of the author as of the date of this report. They do not necessarily reflect the opinions of Deutsche Bank and are subject to change without notice. Deutsche Bank has no obligation to update, modify or amend this report or to otherwise notify a recipient thereof in the event that any opinion, forecast or estimate set forth herein, changes or subsequently becomes inaccurate. Prices and availability of financial instruments are subject to change without notice. This report is provided for informational purposes only. It is not an offer or a solicitation of an offer to buy or sell any financial instruments or to participate in any particular trading strategy. Target prices are inherently imprecise and a product of the analyst judgement.

In August 2009, Deutsche Bank instituted a new policy whereby analysts may choose not to set or maintain a target price of certain issuers under coverage with a Hold rating. In particular, this will typically occur for "Hold" rated stocks having a market cap smaller than most other companies in its sector or region. We believe that such policy will allow us to make best use of our resources. Please visit our website at http://gm.db.com to determine the target price of any stock.

The financial instruments discussed in this report may not be suitable for all investors and investors must make their own informed investment decisions. Stock transactions can lead to losses as a result of price fluctuations and other factors. If a financial instrument is denominated in a currency other than an investor's currency, a change in exchange rates may adversely affect the investment. Past performance is not necessarily indicative of future results. Deutsche Bank may with respect to securities covered by this report, sell to or buy from customers on a principal basis, and consider this report in deciding to trade on a proprietary basis. Prices are current as of the end of the previous trading session unless otherwise indicated and are sourced from local exchanges via Reuters, Bloomberg and other vendors. Data is sourced from Deutsche Bank and subject companies.

Unless governing law provides otherwise, all transactions should be executed through the Deutsche Bank entity in the investor's home jurisdiction. In the U.S. this report is approved and/or distributed by Deutsche Bank AG, a joint stock corporation with limited liability incorporated in the Federal Republic of Germany with its principal office in Frankfurt am Main. Deutsche Bank AG is authorised under German Banking Law (competent authority: European Central Bank) and is subject to subject Unless governing law provides otherwise, all transactions should be executed through the Deutsche Bank entity in the investor's home jurisdiction.
